Outbreak investigation steps in the case of 2019 novel coronavirus infection, a review

Published On: March 22, 2020 | Pages: 001 - 007

Author(s): Dessalew Habte Alene* and Waktole Yadeta

Coronaviruses are a large family of viruses that are common in many different species of animals, including camels, cattle, cats, birds and bats. In January 2020, it causes an outbreak of respiratory illness caused by a novel (new) coronavirus first identified in Wuhan, Hubei Province, China. Additional cases have been identified in a growing number of other internati ...

Apheresis Procedure could Prevent Sequele of Hsv1 Encephalitis-Case Report

Published On: May 30, 2020 | Pages: 010 - 013

Author(s): Vjeroslava Slavic*

Background: Herpes simplex virus 1 is consistently the most common cause of sporadic encephalitis worldwide which leaves neurological deficits in more than 60% of survived patients. The immune response of a diseased person has a major impact not only on the course of the disease, but also on the response to the applied protocol, as well as the severity of brain damage ...
