A multidisciplinary clinic for Filipino patients with skeletal dysplasia: Opportunities and Challenges

Published On: October 24, 2020 | Pages: 027 - 029

Author(s): Maria Melanie Liberty B Alcausin, Ebner Bon G Maceda*, Gracia Cielo E Balce, Joycie Eulah H Abiera and Maria Glorian B Tomen

Purpose: Skeletal dysplasias comprise a heterogenous group of genetic disorders that have generalized abnormalities in cartilage and bone. Although individually rare, collectively it is common with an estimate of 1 in 2000 to 3000. Individuals with skeletal dysplasias are known to be at risk for a myriad of medical complications associated with their conditions; hence ...

Mitochondrial disease, hypertrophic cardiomyopathy and cutaneous lupus in an infant with food hypersensitivity

Published On: November 04, 2020 | Pages: 030 - 035

Author(s): E Estrada-Reyes*, D Lopez-Gallegos, E Fauquier-Fuentes, M Pardo-Castañeda, E Barragán- Perez, I Nuñez-Barrera, M Sanchez-Ruiz, S Nuñez-Barrera and G Ramon-Garcia

This paper describes a 4 month-old-girl with food allergies, mitochondrial disease, cutaneous lupus, and hypertrophic cardiomyopathy. She suffered from infectious pericarditis due to Coxsackie virus as a complication. She additionally presented bicytopenia (hemoglobin levels 8.9 g/dL, platelets 127 x 10³ / μL), high lactate levels (5mmol/L), seizures, hypertrophic card ...

Hematuria in a Patient with Non-malignant Bladder Nodules

Published On: April 13, 2020 | Pages: 007 - 009

Author(s): Terese S Bergheim, Visal Nga, Andrew C Burg and Bahman Chavoshan*

Introduction: Gross hematuria in adults with resultant anemia is highly concerning for genitourinary malignancy. However, in rare instances, malakoplakia can mimic such malignancy. Malakoplakia is a benign granulomatous condition with malfunction of the phagolysosomal activity of macrophages and monocytes. This leads to formation of foamy histocytes with intracytopla ...

Cutis marmorata telangiectasia congenita-a needle in the neonatal dermatology haystack?

Published On: April 03, 2020 | Pages: 004 - 006

Author(s): Hassan Shakeel* and Ather Ahmed

Cutis Marmorata Telangiectasia Congenita (CMTC, also known as van Lohuizen syndrome) is a rare disorder characterised by dilatation of the cutaneous vasculature. This results in a blue-purple 'marbled' appearance of the skin due to telangiectasia, phlebectasia and persistent cutis marmorata. It is often mistaken for benign cutis marmorata and is therefore likely under ...
