Detection of katG Ser315Thr substitution in Mycobacterium tuberculosis infected patients using PCR -RFLP method for screening Isoniazid-Resistance

Published On: January 22, 2019 | Pages: 001 - 004

Author(s): Shivaji K Jadhav* and Sanjay R Mote

Currently mycobacterium tuberculosis is major health issue to the Indian population as well as global. According to WHO around 8 million cases of Tuberculosis occur each year, which resulting in approximately 3 million deaths and the situation is more complicated due to emergence of multidrug-resistant TB. It is the leading cause of death worldwide and results from a ...
